Viscoelastics

EyeGel 2%
EyeGel Plus 2.4%

Indication:

EyeGel is indicated for use as a space occupying, tissue protective fluid and lubricant during various intraocular surgical procedures including intracapsular and extracapsular cataract extraction, IOL implants and corneal transplants.

Composition:

EyeGel 2%
Hydroxypropyl Methyl cellulose U.S.P.....2% w/v
Sterile Isotonic Base.....q.s.

EyeGel Plus 2.4%
Hydroxypropyl Methyl cellulose U.S.P.....2.4% w/v
Sterile Isotonic Base.....q.s.

Contraindications:

EyeGel is contraindicated for any procedure where the risk of use of a viscoelastic surgical fluid would outweigh any potential benefits during surgery.

Description:

EyeGel is a optically clear fluid of consistent high viscosity, formulated from a high molecular weight synthetic carbohydrate.

Packing:

EyeGel 2% & EyeGel Plus 2.4% is supplied in

5 ml Vial.
2 ml pre-filled syringe with cannula.
